

Palestinian Territory Country Insights

21 Feb 2025

Congratulations! This country has available data.

This page includes country-specific insights and more detailed analysis, including carbon stocks, emissions factors, and ecosystem wetland area for mangrove, marsh, and seagrass ecosystems. This report details information for the selected country, **Palestinian Territory**.

Please explore the rest of the dashboard for more exciting visualizations, map features, and data.

Resources referenced to calculate estimates for **Palestinian Territory** are listed below under ‘References’ at the bottom of this document.

Total Carbon Stock Estimates

Total Carbon stock estimates were calculated for each country and habitat At this time total Carbon stock estimates do not include seagrass

We estimate that **Palestinian Territory** contains between 0 to 0 metric tonnes of soil C to a depth of 1 m, with a mean estimate of 0 metric tonnes C.

| country | territory | habitat | total_stock | total_stocks_low | total_stocks_high | total_stocks_se |
|-----------------------|-----------------------|---------|-------------|------------------|-------------------|-----------------|
| Palestinian Territory | Palestinian Territory | total | 0 | 0 | 0 | 0 |

This total estimate includes total mangrove carbon stocks, from NA to NA metric tonnes of soil C to a depth of 1 m, with a mean estimate of NA

| country | territory | habitat | total_stock | total_stocks_low | total_stocks_high | total_stocks_se |
|-----------------------|-----------------------|----------|-------------|------------------|-------------------|-----------------|
| Palestinian Territory | Palestinian Territory | mangrove | NA | NA | NA | NA |

This total estimate also includes total tidal marsh carbon stocks, ranging from NA to NAmetric tonnes of soil C to a depth of 1 m, with a mean estimate of NA

| country | territory | habitat | total_stock | total_stocks_low | total_stocks_high | total_stocks_se |
|-----------------------|-----------------------|---------|-------------|------------------|-------------------|-----------------|
| Palestinian Territory | Palestinian Territory | marsh | NA | NA | NA | NA |

Seagrass carbon stocks were not included in the total value due to lack of a global, transparent, and independently assessed seagrass habitat map, however, best available areas and stocks for **Palestinian Territory** are explored in the following ‘Wetland Areas and Activities’ section.

Wetland Areas and Activities

We estimate mangrove area in **Palestinian Territory** to be NA to NA hectares, with a mean estimate of NA hectares according to Global Mangrove Watch Bunting et al. (2018).

We estimate tidal marsh area in **Palestinian Territory** to be NA to NA hectares, with a mean estimate of hectares according to Worthington et al. (2024).

We estimate seagrass area to be **Palestinian Territory** to be a mean of 1745 hectares, according to McKenzie et al. (2020), aggregating data from multiple sources.

McKenzie et al. (2020) classifies seagrass area estimates as either high or medium to low confidence. seagrass_area_high_confidence % of the estimated seagrass area of **Palestinian Territory** is considered high to medium confidence, while seagrass_area_low_confidence % of the estimated seagrass area is categorized as low confidence.

Calculated Stocks and Emissions Factors

This section of the report details whether data is available to estimate Tier I, Tier II, or Tier III value estimates for tidal marsh, mangrove, and seagrass ecosystems in **Palestinian Territory**.

If data for the selected country is available in the Coastal Carbon Atlas, we have applied a Tier II emission factor based on a simple average of country specific data queried from the Atlas.

Data from **Palestinian Territory** includes 0 soil profiles from 0 watersheds. This data comes from 0 different habitat types.

If there is not yet any country specific information in the Coastal Carbon Atlas, we instead applied IPCC Tier I estimate. IPCC Tier I estimates for mangrove, marsh, and seagrass ecosystems are listed below.
SOURCE

The table in this section also details whether the calculated Tier II value is significantly different from the estimated Tier I values. This is observed in the “Overlap” column.

Table 4: IPCC Tier I Value Estimates

| Habitat | Mean | Lower_CI | Upper_CI |
|----------|------|----------|----------|
| mangrove | 386 | 351 | 424 |
| marsh | 255 | 254 | 297 |
| seagrass | 108 | 84 | 139 |

Table 5: Availability of Tier I and Tier II Data

| Country | Territory | Habitat | Tier | Overlap |
|-----------------------|-----------------------|----------|--------|---------|
| Palestinian Territory | Palestinian Territory | mangrove | Tier I | NA |
| Palestinian Territory | Palestinian Territory | marsh | Tier I | NA |
| Palestinian Territory | Palestinian Territory | seagrass | Tier I | NA |

Tier I Carbon Stocks

This table includes Tier I Carbon Stocks included for **Palestinian Territory**.

| country | territory | habitat | stock_MgHa_stock | stock_MgHa_lowerCI | stock_MgHa_upperCI | carbon_pool |
|-----------------------|-----------------------|----------|------------------|--------------------|--------------------|-------------|
| Palestinian Territory | Palestinian Territory | mangrove | 386 | 351 | 424 | TierI soil |
| Palestinian Territory | Palestinian Territory | marsh | 255 | 254 | 297 | TierI soil |
| Palestinian Territory | Palestinian Territory | seagrass | 108 | 84 | 139 | TierI soil |

Tier II Carbon Stocks

This table includes Tier II Carbon Stock estimates for **Palestinian Territory**. Estimates in this table were derived from data queried from the Coastal Carbon Atlas. SOURCE

| country | territory | habitat | tier | carbon_pool | stock_MgHa_stock | stock_MgHa_lowerCI | stock_MgHa_upperCI | carbon_pool |
|---------|-----------|---------|------|-------------|------------------|--------------------|--------------------|-------------|
|---------|-----------|---------|------|-------------|------------------|--------------------|--------------------|-------------|

Tier III Carbon Stocks

Tier III carbon stocks were estimated, when available, from remote sensing data from Maxwell et al 2021 and Sanderman et al 2018. The table below details whether estimated values are available for **Palestinian Territory**, and any overlap with associated Tier I or Tier II values.

If there are no Tier III estimates associated with the selected country, please refer to Tier I and Tier II tables.

[1] "There are currently no Tier III remote sensing estimates for this country. Please refer to Tier
