Dominican Republic Country Insights

21 Feb 2025

Congratulations! This country has available data.

This page includes country-specific insights and more detailed analysis, including carbon stocks, emissions factors, and ecosystem wetland area for mangrove, marsh, and seagrass ecosystems. This report details information for the selected country, **Dominican Republic**.

Please explore the rest of the dashboard for more exciting visualizations, map features, and data.

Resources referenced to calculate estimates for **Dominican Republic** are listed below under 'References' at the bottom of this document.

Total Carbon Stock Estimates

Total Carbon stock estimates were calculated for each country and habitat At this time total Carbon stock estimates do not include seagrass

We estimate that **Dominican Republic** contains between 10289659.17 to 7053097.2 metric tonnes of soil C to a depth of 1 m, with a mean estimate of 8671378.19 metric tonnes C.

country	territory	habitat	total_stocks	total_stocks_lower	total_stocks_upper	total_stocks_se
Dominican Republic	Dominican Republic	total	8671378	10289659	7053097	825653.6

This total estimate includes total mangrove carbon stocks, from NA to NA metric tonnes of soil C to a depth of 1 m, with a mean estimate of 8190837.85

country	territory	habitat	total_stocks	total_stocks_lower	total_stocks_upper	total_stocks_se
Dominican Republic	Dominican Republic	mangrove	8190838	NA	NA	775284.8

This total estimate also includes total tidal marsh carbon stocks, ranging from NA to NA metric tonnes of soil C to a depth of 1 m, with a mean estimate of 480540.33

country	territory	habitat	total_stocks	total_stocks_lower	total_stocks_upper	total_stocks_se
Dominican Republic	Dominican Republic	marsh	480540.3	NA	NA	67569.92

Seagrass carbon stocks were not included in the total value due to lack of a global, transparent, and independently assessed seagrass habitat map, however, best available areas and stocks for **Dominican Republic** are explored in the following 'Wetland Areas and Activities' section.

Wetland Areas and Activities

We estimate mangrove area in **Dominican Republic** to be 15798.2490154795 to 2130.36554832094 hectares, with a mean estimate of 17992.148965329 hectares according to Global Mangrove Watch Bunting et al. (2018).

We estimate tidal marsh area in **Dominican Republic** to be 1141.44544183204 to 2130.36554832094 hectares, with a mean estimate of hectares according to Worthington et al. (2024).

We estimate seagrass area to be **Dominican Republic** to be a mean of 46020 hectares, according to McKenzie et al. (2020), aggregating data from multiple sources.

McKenzie et al. (2020) classifies seagrass area estimates as either high or medium to low confidence. seagrass_area_high_confidence % of the estimated seagrass area of **Dominican Republic** is considered high to medium confidence, while seagrass_area_low_confidence % of the estimated seagrass area is categorized as low confidence.

Calculated Stocks and Emissions Factors

This section of the report details whether data is available to estimate Tier I, Tier II, or Tier III value estimates for tidal marsh, mangrove, and seagrass ecosystems in **Dominican Republic**.

If data for the selected country is available in the Coastal Carbon Atlas, we have applied a Tier II emission factor based on a simple average of country specific data queried from the Atlas.

Data from **Dominican Republic** includes 9 soil profiles from 9watersheds. This data comes from 1 different habitat types.

If there is not yet any country specific information in the Coastal Carbon Atlas, we instead applied IPCC Tier I estimate. IPCC Tier I estimates for mangrove, marsh, and seagrass ecosystems are listed below. **SOURCE**

The table in this section also details whether the calculated Tier II value is significantly different from the estimated Tier I values. This is observed in the "Overlap" column.

Table 4: IPCC Tier I Value Estimates

Habitat	Mean	Lower_CI	Upper_CI
mangrove	386	351	424
marsh	255	254	297
seagrass	108	84	139

Table 5: Availiability of Tier I and Tier II Data

Country	Territory	Habitat	Tier	Overlap
Dominican Republic	Dominican Republic	mangrove	Tier II	Country-specific average overlaps Tier I
Dominican Republic	Dominican Republic	marsh	Tier I	NA
Dominican Republic	Dominican Republic	seagrass	Tier I	NA

Tier I Carbon Stocks

This table includes Tier I Carbon Stocks included for **Dominican Republic**.

country	territory	habitat	stock_MgHa_mean	stock_MgHa_lowerCI	stock_MgHa_upperCI	tier	carbon_pool
Dominican Republic	Dominican Republic	marsh	255	254	297	TierI	soil
Dominican Republic	Dominican Republic	seagrass	108	84	139	TierI	soil

Tier II Carbon Stocks

This table includes Tier II Carbon Stock estimates for **Dominican Republic**. Estimates in this table were derived from data queried from the Coastal Carbon Atlas. SOURCE

country	territory	habitat	tier	carbon_pool	stock_MgHa_mean	stdev_MgHa	stock_MgHa_upperCI	stock_MgHa_lowerCI
Dominican Republic	Dominican Republic	mangrove	TierII	soil	455.2451	28.11109	510.3418	400.1484

Tier III Carbon Stocks

Tier III carbon stocks were estimated, when available, from remote sensing data from Maxwell et al 2021 and Sanderman et al 2018. The table below details whether estimated values are available for **Dominican Republic**, and any overlap with associated Tier I or Tier II values.

If there are no Tier III estimates associated with the selected country, please refer to Tier I and Tier II tables.

country	territory	habitat	stock_MgHa_Median	stock_MgHa_lowerCI	stock_MgHa_upperCI	overlaps_tierII	tierIII_tierII_overlaps	tierIII_gt_tierI	tierIII_tierI_overlaps	tier
Dominican Republic	Dominican Republic	mangrove	409.3424	216.6148	602.07	less than	Remote-sensing esimate overlaps country-specific average	greater than	Remote-sensing esimate overlaps Tier I	Tier III
