Brazil Country Insights

21 Feb 2025

Congratulations! This country has available data.

This page includes country-specific insights and more detailed analysis, including carbon stocks, emissions factors, and ecosystem wetland area for mangrove, marsh, and seagrass ecosystems. This report details information for the selected country, **Brazil**.

Please explore the rest of the dashboard for more exciting visualizations, map features, and data.

Resources referenced to calculate estimates for **Brazil** are listed below under 'References' at the bottom of this document.

Total Carbon Stock Estimates

Total Carbon stock estimates were calculated for each country and habitat At this time total Carbon stock estimates do not include seagrass

We estimate that **Brazil** contains between 187131202.52 to 133903036.8 metric tonnes of soil C to a depth of 1 m, with a mean estimate of 160517119.66 metric tonnes C.

country	territory	habitat	total_stocks	total_stocks_lower	total_stocks_upper	total_stocks_se
Brazil	Brazil	total	160517120	187131203	133903037	13578614

This total estimate includes total mangrove carbon stocks, from NA to NA metric tonnes of soil C to a depth of 1 m, with a mean estimate of 148315808.3

country	territory	habitat	total_stocks	total_stocks_lower	total_stocks_upper	total_stocks_se
Brazil	Brazil	mangrove	148315808	NA	NA	12105879

This total estimate also includes total tidal marsh carbon stocks, ranging from NA to NAmetric tonnes of soil C to a depth of 1 m, with a mean estimate of 12201311.36

country	territory	habitat	total_stocks	total_stocks_lower	total_stocks_upper	total_stocks_se
Brazil	Brazil	marsh	12201311	NA	NA	1755622

Seagrass carbon stocks were not included in the total value due to lack of a global, transparent, and independently assessed seagrass habitat map, however, best available areas and stocks for **Brazil** are explored in the following 'Wetland Areas and Activities' section.

Wetland Areas and Activities

We estimate mangrove area in **Brazil** to be 924292.587329228 to 131855.137789729 hectares, with a mean estimate of 1052648.92979484 hectares according to Global Mangrove Watch Bunting et al. (2018).

We estimate tidal marsh area in **Brazil** to be 70647.7093242728 to 131855.137789729 hectares, with a mean estimate of hectares according to Worthington et al. (2024).

We estimate seagrass area to be **Brazil** to be a mean of 42934 hectares, according to McKenzie et al. (2020), aggregating data from multiple sources.

McKenzie et al. (2020) classifies seagrass area estimates as either high or medium to low confidence. seagrass_area_high_confidence % of the estimated seagrass area of **Brazil** is considered high to medium confidence, while seagrass_area_low_confidence % of the estimated seagrass area is categorized as low confidence.

Calculated Stocks and Emissions Factors

This section of the report details whether data is available to estimate Tier I, Tier II, or Tier III value estimates for tidal marsh, mangrove, and seagrass ecosystems in **Brazil**.

If data for the selected country is available in the Coastal Carbon Atlas, we have applied a Tier II emission factor based on a simple average of country specific data queried from the Atlas.

Data from **Brazil** includes 214 soil profiles from 56watersheds. This data comes from 3 different habitat types.

If there is not yet any country specific information in the Coastal Carbon Atlas, we instead applied IPCC Tier I estimate. IPCC Tier I estimates for mangrove, marsh, and seagrass ecosystems are listed below. **SOURCE**

The table in this section also details whether the calculated Tier II value is significantly different from the estimated Tier I values. This is observed in the "Overlap" column.

Table 4: IPCC Tier I Value Estimates

Habitat	Mean	Lower_CI	Upper_CI
mangrove	386	351	424
marsh	255	254	297
seagrass	108	84	139

Table 5: Availiability of Tier I and Tier II Data

Country	Territory	Habitat	Tier	Overlap
Brazil	Brazil	mangrove	Tier II	Country-specific average is significantly less than Tier I
Brazil	Brazil	marsh	Tier II	Country-specific average is significantly less than Tier I
Brazil	Brazil	seagrass	Tier II	Country-specific average overlaps Tier I

Tier I Carbon Stocks

This table includes Tier I Carbon Stocks included for **Brazil**.

country	territory	habitat	stock_MgHa_mean	stock_MgHa_lower	stock_MgHa_upper	tier	carbon_pool

Tier II Carbon Stocks

This table includes Tier II Carbon Stock estimates for **Brazil**. Estimates in this table were derived from data queried from the Coastal Carbon Atlas. SOURCE

country	territory	habitat	tier	carbon_pool	stock_MgHa_mean	stock_MgHa_sd	stock_MgHa_upperCI	stock_MgHa_lowerCI
Brazil	Brazil	mangrove	TierII	soil	140.89770	5.485917	151.6499	130.14549
Brazil	Brazil	marsh	TierII	soil	104.61017	5.518119	115.4255	93.79486
Brazil	Brazil	seagrass	TierII	soil	89.25408	9.735740	108.3358	70.17237

Tier III Carbon Stocks

Tier III carbon stocks were estimated, when available, from remote sensing data from Maxwell et al 2021 and Sanderman et al 2018. The table below details whether estimated values are available for **Brazil**, and any overlap with associated Tier I or Tier II values.

If there are no Tier III estimates associated with the selected country, please refer to Tier I and Tier II tables.

country	territory	habitat	stock_MgHa_mean	stock_MgHa_lower	stock_MgHa_upper	tierIII_gtTierI	overlaps_tierIII	tierIII_gtTierII	overlaps_tierII	tier
Brazil	Brazil	mangrove	360.2520	322.8846	397.6195	greater than	Remote-sensing esimate is significantly greater than country-specific average	less than	Remote-sensing esimate overlaps Tier I	Tier III
Brazil	Brazil	marsh	237.8754	225.1731	250.5777	greater than	Remote-sensing esimate is significantly greater than country-specific average	less than	Remote-sensing esimate is significantly less than Tier I	Tier III
